WELBECK COLLIERY DEMOLITION.

When Ron Hull Group were awarded the contract by UK Coal to demolish Welbeck Colliery one of the last working pits in Nottinghamshire, it was IndEx and SES they contacted to assist in the phased explosive demolition of the site.

There were a number of large concrete and steel buildings on the site where precision blasting proved not only to be the safest method of demolition but also the most cost effective.

Over a six month period IndEx and SES together worked alongside UK Coal and the Ron Hull Group to demolished by the controlled use of explosives, the coal storage plant, rapid loading bunker, various conveyors and support legs, a number of lighting towers and during the final phase of the demolition watched by hundreds of former employees and local residents the explosive demolition of the two iconic sets of headgear brought an end Welbeck colliery's 100 years of proud history.

By utilising the latest technology explosive cutting charges, in hole charges and kicking charges combined with precision collapse designs and meticulous planning a successful outcome was assured.
